ADMIN RECORD

Mr. Slaten:

rdance with section 7 of the Endangered Species Act of 1973, as amended (16 U.S.C. seq.), and the Interagency Cooperation Regulations (50 CFR 402), the U.S. Fish and e Service (Service) has reviewed the Department of Energy's (Energy) assessment for il impacts to federally listed endangered and threatened species associated with the tion and operation of the two air monitoring stations located near the Rocky Flats : 88<sup>th</sup> Avenue and Kipling Street and at 100<sup>th</sup> Avenue between Alkire and Simms and a meteorological monitoring station to be located near Great Western Reservoir.

ee with Energy's determination of "no adverse effect" for threatened and endangered resulting from the installation and operation of the air monitoring and meteorological ing stations if 1) the air sampler motors are oriented away from the bald eagle nest, und absorbing wall is built around the sampler motor, 3) when the eagles return, ance on the 100<sup>th</sup> Avenue station is performed when the eagles are roosting away e nest, and 4) construction of both the air sampling and meteorological stations is ed before the eagles return. We have been notified by the Colorado Bird atory that the nesting pair of bald eagles at Standley Lake has left the area and did not s. Therefore, construction activities can begin at anytime.

ussed in your letter of February 21, 1995, if eagle monitoring indicates that operation : stations is disturbing the eagles; they should be shut down and this office contacted ss further activities. The Service appreciates your efforts towards protecting ed and endangered species. If you have questions or require additional information, ontact Andrew Archuleta at (303) 231-5280.

Sincerely,

LeRoy W. Carlson  
Colorado Field Supervisor
